So you want to go from **New York to London** give Sabre 3 seconds...

**START WITH**

1,932,102,241,635

potential ways to fly from New York JFK to London Heathrow, within the next year including different airlines, cabins, schedules, fares, connections and combinations of airlines.

5,293,430,799

options for a specific day of travel

The number of options shrinks when you select a date to travel. With a uniquely developed, patented algorithm that mathematically constructs all the logical flight options, the Sabre® air shopping system finds all the possible options for the date you want to depart.

3,225,937,750

options actually available for you to purchase

In order to narrow down the universe of options, the Sabre system deploys proprietary algorithms and caching technology to identify the possible options that are likely to have seats available. The system is so advanced it literally grows smarter with each search.

6,113,387

options likely to provide the best value

Sophisticated algorithms identify the subset of flights with the greatest likelihood of yielding the lowest fares.

500

top options that best fit your travel plans

The Sabre system returns the lowest-priced options so you can select the itinerary that best meets your needs.

option that you select

You pick the flight that gives you the best value based on schedule, price, brand and other factors.

**KNOW WHEN YOU WANT TO GO?**

**BUT WHAT IS AVAILABLE FOR ME?**

**WHAT IS THE BEST PRICE FOR THE WAY I TRAVEL?**

**WHICH ONES FIT MY NEEDS?**

**MY PICK!**

New York to London via Buenos Aires?

The intelligence of our shopping system automatically weeds out impractical options that involve undesirable or unwieldy routes.

**did you know...**

Since it is not practical to price every possible combination, we use powerful technology to identify the largest possible subset of flights to price. And our intelligent, sophisticated algorithms ensure it is the right subset of flights that will result in the lowest possible fares.

hard to believe?
